Arc-lamp moving lights

Claypaky's range of arc-lamp moving lights is the most comprehensive in the world. It includes Beam, Wash, Spot and Profile moving heads and moving mirror lights. Their powers range from the 189 watts of the famous award-winning Sharpy to the 1500 watts of the higher category models. The different types of light in each power category are complementary to each other, to provide the best selection

of colors on stage and allow you to take advantage of the range's modular features. There are also hybrid and multifunctional lights, such as the Scenius Unico, which has all these features in one light. All the lights have high performance profiles and are designed to meet the needs of professional lighting designers. However they are also designed to be suitable for users seeking the best price/quality ratio.

The range includes a large number of unique innovations, introduced on the market by Claypaky: the Sharpy Beam's ultraconcentrated light effect, the four-blade framing system, the Stay-Sharp-Zoom (autofocus) and the motorized Top Hat, just to name a few. The models in the Scenius range also produce extremely high quality light with an outstanding CRI.

You will always find the right light for every situation among the Claypaky moving heads, from theatre, television and corporate events to rock concerts, showrooms and theme parks. They are bought by big and small rental companies alike, and used in discos and venues, as well as in all other professional show lighting.

LED-based static lights

The K-Eye S20 and S10 are the fixed-head versions of the HCR models, which feature very high quality white and coloured light. They can be manually adjusted over 210°. Stormy innovates tradition since it uses the latest LED technology, but retains all the charm of a classic strobe. The light source is a strip of powerful white or RGBW LEDs, which perfectly emulate a bright Xenon linear lamp. Odeon is a range of IP65 LED lights for architectural use (flood and linear versions), available with 15°, 25°, 35° optics and RGBW, Tunable White and White configurations.

The GlowUp and GlowUp Strip are IP65 LED uplighters. They may be battery or mains powered. Using batteries means no complex wiring and cables at events, thus considerably reducing rigging times and costs. The GlowUp is an ultra-compact lightweight portable light (7.5 Kg / 16.5 lbs) with up to 20 hours of battery life. The GlowUp Strip 100 is a LED bar for stages and architectural lighting, with 10 powerful RGBW LEDs and an electronic zoom that may be adjusted from 14° to 70°.

Arc-lamp static lights

Spherilight is a powerful arc-lamp static light with an IP54 protection rating, ideal especially for architectural applications.

Roxter-case

Claypaky roxter-cases use modern materials and technology to meet the complex needs of riggers working on tours. They have to be strong and tough, but at the same time easy to use and lightweight. Their high quality is certified by strict compliance with the ATA standards for commercial shipments.

LED-based moving lights

Claypaky LED moving heads are the best choice for rental firms that want high quality, high performance lights with low running costs.

The Axcor Profile 900 is a spotlight that fits a white LED engine with high luminous efficiency. It can deliver nearly 900 Watts (46,000 lumens), much more than any other light on the market. This spotlight features CMY color mixing with a CTO filter, a wide selection of effects as the Claypaky patented framing system.

The Axcor 300 line is made up of a spot light, a wash light and a beam light, all with a white LED light source with rated power of about 180 watts. The quality of their effects, their practical structure, and their high light output derive from the high-end products Claypaky specializes in.

The lights in Claypaky's K-EYE HCR range are tools specifically designed for highly professional uses where color purity, shade and color temperature variability, uniform light projection and silent operation are absolutely essential. They fit a six-chip LED source run by an Osram software algorithm, and reach CRI values that have never been achieved before by any other classic wash light.

The wide A.leda range includes the innovative multifunction B-EYE lights, wash lights, CCs (color changers), TWs (2600-7500K variable white) and Ws (7500K white).

The SharBar is a moving LED bar with advanced features and individual control of each single LED, which transform it into a completely new multi-beam effect light.
